[Háva, J. 2023. A new *Fustiger* LeConte, 1866 species from French Guiana (Coleoptera: Staphylinidae: Pselaphinae: Clavigeritae). Munis Entomology & Zoology, 18 (2): 903-908]

---

**ABSTRACT:** The species *Fustiger lenoiri* sp. nov. from French Guiana is described, illustrated and compared with related species. A table of *Fustiger* species and their known ant hosts recorded from Neotropical Region is presented.

**KEY WORDS:** Taxonomy, new species, Coleoptera, Staphylinidae, Pselaphinae, Fustigerini, *Fustiger*, French Guiana

---

The genus *Fustiger* LeConte, 1866 belongs to the subfamily Pselaphinae, supertribe Clavigeritae and tribe Fustigerini. The genus currently contains 31 species known from Mexico and Neotropical Region (Park et al., 1976; Newton & Chandler, 1989). In the article is described a new species collected by French entomologists in French Guiana from a nest with two ant species (*Camponotus femoratus* and *Crematogaster* sp.) in a Bromeliacea plant.

### MATERIAL AND METHODS

Terminology follows Besuchet & Hlaváč (2011) and Hlaváč & Nakládal (2018). Type depository:

JHAC Private Entomological Laboratory & Collection, Jiří Háva, Prague-west, Czech Republic;

MNHN Muséum National d'histoire Naturelle, Paris, France.

Specimens of the presently described species are provided with red, printed label with the text as follows: "HOLOTYPE [or PARATYPE] *Fustiger lenoiri* sp. nov. Jiří Háva det. 2023".

### DESCRIPTION

Family Staphylinidae  
Subfamily Pselaphinae  
Supertribe Clavigeritae  
Tribe Fustigerini  
Genus *Fustiger* LeConte, 1866

**Type species:** *Articerus brasiliensis* Westwood, 1856, designated by Newton & Chandler (1989).

***Fustiger lenoiri* sp. nov.**  
 (Figs. 1-6)

**Type locality.** French Guiana, Regina ,  $04^{\circ}13'00.2''$  N  $52^{\circ}07'16.3''$  W.

**Type material.** Holotype ( $\delta$ ): French Guiana, Regina,  $04^{\circ}13'00.2''$  N  $52^{\circ}07'16.3''$  W, 50 m, 11.2.2015, A. Lenoir lgt., (MNHN). Paratypes (13 spec.): the same data as holotype, (JHAC).

**Description.** Body (Figs. 1-2), brown, shining, with yellow setation, length 2.7 mm, maximum width of elytra 1.2 mm.

Head dark brown, length 0.4 mm, width 0.2 mm, coarsely punctured with yellow setation, palpi brown with short yellow setation. Antennae with terminal antennomere 0.6 mm long. Eyes large with short, yellow microsetation.

Pronotum dark brown, length 0.5 mm, width 0.5 mm, coarsely punctured, shining with discal, longitudinal groove, covered by yellow setation.

Elytra brown, length 0.8 mm, width 1.2 mm, finely punctured, covered by yellow setation, with short oblique striae meeting at the sutural corners at base.

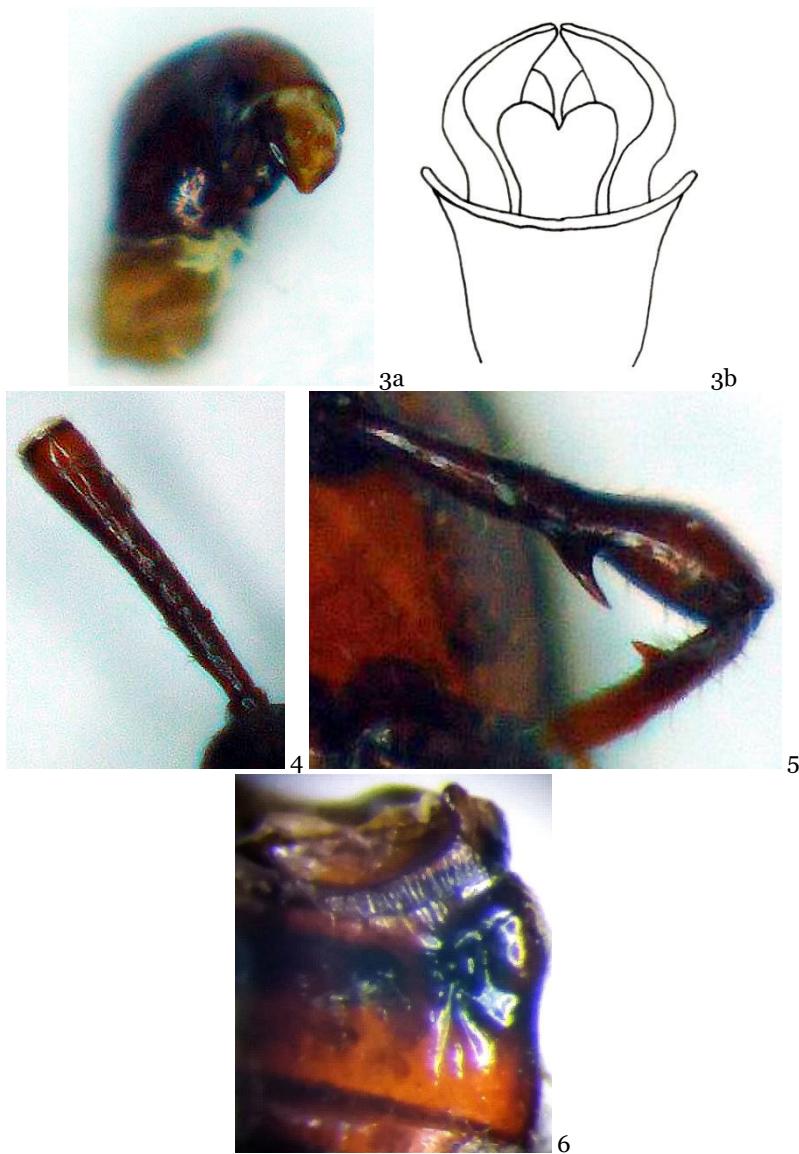

Mesosternum shining, with long and narrow median, longitudinal strip of yellow setation, finely punctured.

Abdomen with only the composite tergite visible dorsally, with large basal depression reaching apical third of composite tergite; composite tergite bearing four groups of trichomes as follows: first group of trichomes narrow, situated on extension of pleurite I, second narrow group of trichomes is located close to first one, a large triangular group of trichomes in depth and a perpendicular group of trichomes located at posterior margin of composite tergite.

Mesotibiae and mesofemora brown with black areas, covered by short, yellow setae, with well-defined spines (Fig. 5).

Aedeagus as in Figs. 3a-3b, 0.7 mm long.

Figures 1-5. *Fustiger lenoiri* sp. nov.: 1- habitus, dorsal aspect; 2- habitus, ventral aspect; 3- male genitalia; 4- male antenna; 5- spines on meso-femur and meso-tibia; 6- lateral part of first visible abdominal ventrite.

**Variability.** Body length 2.7-2.9 mm.

**Differential diagnosis.** The new species belong to the genus *Fustiger* according to following characters: third antennomere entire distally, with no suture. The new species differs from all known species by the structure of the antennae (Fig. 4), male genitalia (Fig. 3) and spines on mesofemur and mesotibia.

**Host ant.** The beetles were inside a nest with two ant species (*Camponotus femoratus* and *Crematogaster* sp.), in a Bromeliacea plant A. Lenoir (pers. comm.).

**Etymology.** Dedicated to my very good friend and collector of the new species Alain Lenoir (France).

## ACKNOWLEDGEMENTS

I are very obliged to Alain Lenoir (France) for providing me the interesting material, to Peter Hlaváč (Czech Republic) with help regarding the table and to Larry G. Bezark (U.S.A.) for revision of the English text of the manuscript.
